CONTENTS

Volume 22, Issues 1–6

International Journal of
MATHEMATICAL EDUCATION IN SCIENCE AND TECHNOLOGY

Issue No. 1, JANUARY

A cluster analysis of mathematics examination papers. R. CROASDALE ... 1

When the limit is not taken. D. M. DREW 9

Computerized entry mathematics into the technologies. K. J. MANN ... 15

The discovery and enumeration of representative symbols for circulant tournaments. V. J. RAYWARD-SMITH 23

TTU/GTE-PREP: An example of corporate industry's impact on a high-ability programme for pre-college students. M. RAMSEY and D. WALLING ... 35

On a class of infinite matrices. L. M. DEALBA 41

A sixth-form modelling problem. A. R. NICHOLSON 45

An aspect of the Gambler's Ruin problem. H. L. SKALA 51

Van Hiele levels and the SOLO taxonomy. M. JURDAK 57

An adaption of the Frobenius method for use on a computer. F. E. CLIFFORD 61

The place of the history of mathematics in the undergraduate curriculum. R. HAGGARTY 65

Understanding sampling distributions in inferential statistics. P. J. PEDLER 69

Significant digits. L. VEHMANEN 89

Assessing mathematical science projects. C. R. HAINES 97

Matrix inversion by augmentation and reduction. T. J. SHESKIN 103

Modelling students' thinking on a proportional reasoning task. H. G. MELLAR 111

Classroom notes 121

Issue No. 2, MARCH

'rule of 70': extending 'rule of 72' arguments to interest rates with quarterly, monthly, and daily compounding. W. M. CROSS and K. A. BLATNER ... 167

On the approximate analytical solution of a problem of optimization in the field of immobilized enzymes. F. X. MALCATA 177

On concentric magic squares and magic squares of order $4n+2$. M. K. DAS 187

Fractional calculus and bilateral expansions of incomplete beta and elliptic functions. R. N. KALIA 203

A basic review of *Mathematica*. D. BROWN, B. A. HASSAN and E. HJELMFELT 207

Introduction of criticality indices into PERT instruction. N. B. MARKS ... 223

'Geometry is motion': a dynamic approach to the teaching of school Euclidean geometry. C. TOUMASIS 229

Random distributions of points in n-dimensional spheres. B. L. BURROWS and R. F. TALBOT 243

Graphical solution of problems on simple interest. U. RAY 253

Computational estimation skills of pre-service elementary teachers. T. GOODMAN 259

Taylor series expansion method for solving multidimensional integral equations. K. C. LIU 273

Solution of stochastic integral equation for multiple scattering by method of Taylor series expansion. K. C. LIU 281

An application of mathematical modelling to school biotechnology. R. PATON 291

A simple mathematical model for teaching diffusion in biology. R. PATON 297

The second derivative test for constrained extremum problems. M. A. H. NERENBERG 303

Meanings of division and their implication for science teaching—a survey amongst elementary school teachers. R. HADASS and J. BRANSKY ... 309

Age-dependent branching process with birth process immigration. P. R. PARTHASARATHY and M. SHARAFALI 317

Determinants by definition. J. HOWARD and J. HOWARD 321

Classroom notes 325

Issue No. 3, MAY

The lifting line equation—revisited. R. K. BERA 341

Applications of the laws of thermodynamics for decision making in the use of alternative energy sources. M. E. KRESS and J. FISHMAN 349

Philosophy of mathematics: an outlook. D. SINGH 359

On sizes and shapes of lattice figures. J. LLIBRE and P. MUMBRÚ 365

Visualization in linear algebra. N. PITCHER 387

Students' degree project as an efficient test discriminator. E. C. NDUKA ... 395

The HGRAM geographical format—its geometrical interpretation and its applications. Y. K. HUEN 403

A computer approach to number theory. A. FÄSSLER 419

Subdivision of a triangle. D. MIDDLETON 425

The cylindrical wave-maker problem in water of uniform finite depth in the presence of surface tension. N. K. GHOSH 429

A proposal for the self-empowered mathematics teacher. J. ENGLISH, J. O'DONOGHUE and A. C. BAJPAI 435

The Incompleat Angler: being a discourse of the mathematics of fish and fishing. D. E. REES 455

An n-dimensional proof of the ε–δ tensor identity. J. D. O'KEEFFE ... 467

A topological approach to counting discontinuities of a real-valued function with interval domain. J. KLIPPERT 471

Classroom notes 475

Issue No. 4, JULY

Comments on mathematical analysis over quaternions. J. F. WEISZ ... 499

Building probability models in a differential equations course. J. M. WATSON 507

The Lipschitz condition without tears. A. EHRLICH 519

A qualitative study of polynomials in high school. N. MOVSHOVITZ-HADAR and ALLA SHMUKLER 523

Difference equations and an artificial pancreatic beta-cell. R. L. OLLERTON and A. G. SHANNON 545

Perplex numbers and quaternions. A. K. T. ASSIS 555

On the relationship between iterative methods for two-point boundary value problems and artificial time stepping techniques. P. GLAISTER ... 563

Mathematica, a new tool for studying optimization. J. H. MATHEWS ... 569

Turtle goes to college: intrinsic representations and graphical integration. U. ARMON and U. LERON 577

Abstract factor analysis of spectroscopic data—another statistical fallacy. R. BAUSCH and A. ABBAS 585

Low-frequency scattering of acoustic plane waves by an arbitrary penetrable cylindrical obstacle. C. KUMAR and D. L. JAIN 595

On certain Fibonacci-type sums. O. BRUGIA, A. DI PORTO and P. FILIPPONI 609

A general analysis of Sylvester's matrix equation. A. J. B. WARD ... 615

Vertical line and point symmetries of differentiable functions. M. D. DE VILLIERS 621

Leibniz's rule for anti-differentiation. JUNG RYE LEE and SOON-YEONG CHUNG 645

A fast procedure to factorize a natural number. C. J. F. RIDDERS ... 651

An index notation for multivariate statistical analysis. D. S. G. POLLOCK ... 657

What environmental studies students think about mathematics and what could be done about it. R. LANDBECK 669

Approximate analytical results for instalment loans. T. C. T. KOTIAH ... 675

Classroom notes 683

Issue No. 5, SEPTEMBER

Applications of the Fourier transform to probability theory and stochastic processes. P. CHACON 695

On a quotient operator for sequences. S. P. GORDON 709

The construction of a didactic itinerary of calculus starting from students' concept images (ages 16–19). F. FURINGHETTI and D. PAOLA 719

Assessing American children's attitudes towards computer technology. R. H. BARBA 731

Arranging a dartboard: implications of incorporating measures of player skill. D. BLEST and B. ROBINSON 739

Using concept questions in teaching mechanics. J. BERRY and T. GRAHAM 749

Summing the vertex angles of stars. W. PAGE 759

Tweedle Dee and Tweedle Dum: on the use of puzzles in computer science instruction. O. D. ANDERSON 769

Surjections—a classroom discussion. T. BEARDON 775

Difference and differential equations in the mathematics of finance. T. C. T. KOTIAH 783

Mathematics courses with a PC. J. J. M. RIJPKEMA, F. H. SIMONS and J. G. M. M. SMITS 791

Computing absorption probabilities for a Markov chain. T. J. SHESKIN ... 799

Natural boundaries and rational approximants. L. SHORT 807

A duality theorem in Hilbert space. A. G. AZPEITIA 813

Insolvability of a geometrical puzzle. J. R. HANSON 819

Efficient bounds on a branch and bound algorithm for graph colouration. S. C. K. CHU 823

A calculator-based computational approach. Part 4. On differences and graphs. J. BRODY, S. H. ERLWANGER and S. ROSENFIELD 833

Classroom notes 843

Announcement 867

Issue No. 6, NOVEMBER

Taking a differential element: its formation and meaning in the didactic discourse of calculus. F. CORDERO-OSORIO 869

Millikan's oil droplet experiment and common divisor probabilities. J. V. PETERS 873

Application of MACSYMA to solutions of ordinary differential equations. YUE-KUEN KWOK 877

A comparison of computer-assisted instructional methods. J. L. ADAMS and L. J. STEPHENS 889

A two-step method for mixed-integer nonlinear programming problems. J. Y. WONG 895

The relation between knowledge and heuristic methods. A. VAN STREUN 899

A Markov chain model in problem solving. M. G. VOSKOGLOU and S. PERDIKARIS 909

Simplified inverse z-transform. M. HASSUL and B. SHAHIAN 915

A family of generalized logistic curves and inhibited population growth. S. P. GORDON 919

On squares, rectangles, rhombuses, ... and the influence of culture and language on students' conceptions. T. PATRONIS and D. SPANOS 927

Heat transfer in a bar: Numerical method and group dynamics. J. B. SZTRAJMAN and A. M. RELA 937

What are the linear isometries of 1_n^p? R. HEMASINHA and J. R. WEAVER ... 945

Interactive generalizing of geometric configurations. H. SCHUMANN ... 953

Cauchy and mathematical induction. F. DUBEAU 965

Algorithms from algebra. J. W. DAVENPORT and M. A. PIERCE 971

Attitudes and perceived usefulness of statistics among health sciences students. SING KAI LO and M. STEVENSON 977

Summation of series. L. SHORT 985

Attrition patterns in a high ability programme for precollege students. E. CURRY, S. HILDEBRAND, M. KUNKEL, A. PITTMAN and D. WALLING 997

Teaching topics in numerical linear algebra using spreadsheets. D. CLEMENTS 1003

Classroom notes 1019

Author index 1029
